

# OpenConstructionEstimate — Netherlands / Amsterdam

**\*\*Construction Work Items, Components & Resources\*\***

---

| Property | Value |  
|---|---|  
| Reference region | Netherlands / Amsterdam |  
| ISO country | NL |  
| Language | `nl` |  
| Currency | `EUR` (ISO 4217) |  
| Source track | `DE\_BERLIN` (Germany / Berlin) |  
| Generated | 2026-04-27 |  
| Work items | 900,225 rows |  
| Unique resources | 6,671 |

## Available Formats

| Format | File |  
|---|---|  
| Parquet | `NL\_AMSTERDAM\_workitems\_costs\_resources\_DDC\_CWICR.parquet` |  
| Excel (formatted) | `NL\_AMSTERDAM\_workitems\_costs\_resources\_DDC\_CWICR\_FORMATTED.xlsx` |  
| Excel (simple) | `NL\_AMSTERDAM\_workitems\_costs\_resources\_DDC\_CWICR\_SIMPLE.xlsx` |  
| Catalog CSV | `DDC\_CWICR\_NL\_AMSTERDAM\_Catalog.csv` |  
| Catalog XLSX | `DDC\_CWICR\_NL\_AMSTERDAM\_Catalog.xlsx` |  
| Qdrant snapshot |  
`NL\_AMSTERDAM\_workitems\_costs\_resources\_EMBEDDINGS\_3072\_DDC\_CWICR.snapshot` |

## How this track was built

This track was generated from `DE\_BERLIN` by  
`0\_Workflow and Pipelines CWICR/python/11-country-track-builder/add\_country\_track.py`.

- **\*\*Norms\*\*** (labour hours, machine hours, resource quantities) are identical to the source track — Resource-Based Costing methodology treats norms as country-agnostic physical first principles.
- **\*\*Prices\*\*** are derived via the cascade  
`type\_factors` → `location\_factor` → optional national overrides`. Type factors come from OECD wage indexes (labour), construction PPP (material), and ECB FX (equipment). FX snapshot date is recorded in the per-resource columns.
- **\*\*Language\*\*** columns are translated where target language differs from source. Existing tracks are used as parallel-text seeds.

## Data Structure

85+ columns organised into:

- Classification hierarchy (10 cols)
- Rate / work-item identifiers (11 cols)

- Resource decomposition (7 cols)
- Labour metrics (11 cols)
- Machinery & equipment (12 cols)
- Price aggregates (16 cols)
- Mass / service / regional markers (~18 cols)

See the repository-level [DATA\_DICTIONARY.md](../DATA\_DICTIONARY.md) for the complete column-by-column reference.

## Qdrant collection

Vector index built from concatenated localised text fields, encoded with OpenAI `text-embedding-3-large` (3072-dim, cosine).

```
qdrant-client snapshot upload \  
--collection ddc_nl_amsterdam \  
--snapshot NL_AMSTERDAM_workitems_costs_resources_EMBEDDINGS_3072_DDC_CWICR.snapshot
```

## Licence

Same as the parent dataset: CC BY 4.0 for data, see [LICENSE-DATA.txt](../LICENSE-DATA.txt). Code: see [LICENSE-CODE.txt](../LICENSE-CODE.txt).
